Job Details

About the Company

Easebuzz is a payment solutions (fintech) company that enables online merchants to accept, process, and disburse payments through developer-friendly APIs. We are focused on building plug-and-play products—including payment infrastructure—to solve end-to-end business challenges across sectors. We're at the center of all things fintech: payments, lending, subscriptions, eKYC—you name it. Easebuzz is where innovation meets execution. We have been consistently profitable and continue to scale rapidly, having grown 4x in the past year alone. Backed by a strong product roadmap and execution, we recently closed a fresh funding round of \$30 million in 2025, led by leading VC firms and strategic investors. This comes in addition to our earlier \$4 million fundraise in March 2021. Easebuzz has been granted Full Authorization from the Reserve Bank of India (RBI) for payment aggregator license in 2025. Our corporate culture is built on openness, ownership, and collaboration. We are an equal opportunity employer and celebrate diversity across all levels. At Easebuzz, you'll find yourself working with passionate colleagues who are committed to growing together. Headquartered in Pune, we also have a presence in Delhi, Mumbai, Kolkata, Bengaluru, and Gurugram.

Job Description

We are looking for a Backend Developer responsible for managing the interchange of data between the server and the users. Your primary focus will be the development of all servers-side logic, ensuring high performance and responsiveness to requests from the front end.

At EaseBuzz, every individual is honed to be a leader and enjoys the freedom to make decisions that she/he sees fit to steer the organization closer towards its goals. We work in small, decentralized teams that promote independent authority and freedom to approach and solve problems creatively. This path nurtures the artisan in every individual and brings to fruition the vision of crafting purpose-built solutions for clients.

Qualifications and Education Requirements

- Proficient knowledge of Python
- Expertise in at least one popular Python framework (like Django/ Flask)
- Well versed with database queries like MySQL or Postgres, etc and have the ability to create database schemas that represent and support business processes
- Should possess in-depth knowledge of object-relational mapping
- Proficient understanding of code versioning tools, such as Git
- Basics of tuning application performance
- Integration of multiple data sources and databases into one system
- Knowledge with tools like Celery, Nginx, Unicorn etc.
- Knowledge in Kafka writing Consumers and Producers would be a **plus point**.
- Knowledge with AWS or GCP would be a **plus point**
